

Technique & Relationship Dataset to Instrument

Rolf Krah

ICAT Schema Discussion, August 2021

Add a new entity class Technique

- Represents an experimental technique.
- Rationale:
 - PaNOSC search API has it in the data model.
 - Want to represent the terms from the ExPaNDS technique ontology.
- Attributes: name, pid, description.
- Relations: many-to-many with Dataset.
- No compatibility issues expected.
- See: #230

Add a relationship between Dataset and Instrument

- Rationale:
 - In the current schema there is only an indirect relation Dataset \rightarrow Investigation \leftrightarrow Instrument.
 - If multiple different instruments are used in one investigation, we can't tell from the schema which dataset has been created by which instrument.
 - PaNOSC search API has the direct link in the data model.
- Add a new many-to-many relation from Dataset to Instrument.
- Do not intend to change the existing relation between Investigation and Instrument.
- No compatibility issues expected.
- See: #228
